

THE CROPSTAR STORY

# BUILT AROUND YOUR OPERATION.

Parts. Precision technology. Service. Custom solutions.

**Two Iowa locations. Global reach.**

Since 2012, Cropstar has grown around the needs of Iowa growers. We bring parts, precision technology and hands-on service together, building solutions around your equipment and the way you farm.

## COLO + YARMOUTH, IOWA

Farming is not a 9-to-5 job. We work when you work, with a commitment to parts, service and support for our local customers.

## LOCAL KNOW-HOW. GLOBAL REACH.

Our work includes planters in Ukraine and a custom NH3 applicator built for a client in India.

OUR HISTORY | GROWING WITH OUR CUSTOMERS

# IOWA ROOTS. A GROWING MISSION.

Serving growers since 2012.

**Cropstar grew by helping growers solve the next problem: first in the crop, then in the cab, and throughout the equipment they depend on.**

## 2012

### YARMOUTH: WHERE IT STARTED

Cully Brumwell founded Cropstar in Yarmouth, Iowa, selling seed, providing agronomy services and offering Ag Leader precision agriculture solutions.

## 2017

### A PARTNERSHIP. A SECOND LOCATION.

Dennis Hapes became a partner and opened Cropstar in Colo, Iowa. The expansion added agricultural parts and broadened the precision ag offering to include Ag Leader, Precision Planting and more.

## GROWING

### MORE WAYS TO SERVE THE FARM

Cropstar also added Fast application equipment and Soil-Max tile plows, expanding the equipment and solutions available to customers.

The purpose behind that growth: bring more of the parts, technology, equipment and hands-on support growers need into one local relationship.

THE PEOPLE BEHIND CROPSTAR

# MEET YOUR CROPSTAR TEAM.

Two locations. Local expertise. People you can count on.

## Jacob Hapes

**Precision Ag Technician & Sales | Colo**

Our resident planter expert, Jacob helps growers with planter technology, practical upgrades and precision ag sales and support.

[jacobhapes@cropstarllc.com](mailto:jacobhapes@cropstarllc.com)

515-460-7161

## Corey Strothman

**Precision Ag Technician & Sales | Yarmouth**

Our resident combine expert, Corey brings a focus on harvest equipment and precision technology to customer sales and support.

[cstrothman@cropstarllc.com](mailto:cstrothman@cropstarllc.com)

319-931-6338

## Kerri Hapes

**Office Manager | Colo | Part-time**

Kerri supports the day-to-day office operations at our Colo location, helping keep the business organized and customers connected with the team.

[officemanager@cropstarllc.com](mailto:officemanager@cropstarllc.com)

## Cully Brumwell

**Founder & Co-owner | Agronomy | Yarmouth**

Cully founded Cropstar in 2012. Our agronomy expert, he helps growers connect seed selection and crop management with their field needs.

[cropstarconsulting@gmail.com](mailto:cropstarconsulting@gmail.com)

319-759-3966

## Dennis Hapes

**Co-owner | GPS & Equipment | Colo**

Dennis joined Cropstar in 2017 and opened the Colo location. He is your resource for GPS and equipment solutions that fit your operation.

🌱 CROPSTAR AG SUPPLY – YOUR PARTNER IN PRODUCTIVITY. 🌱

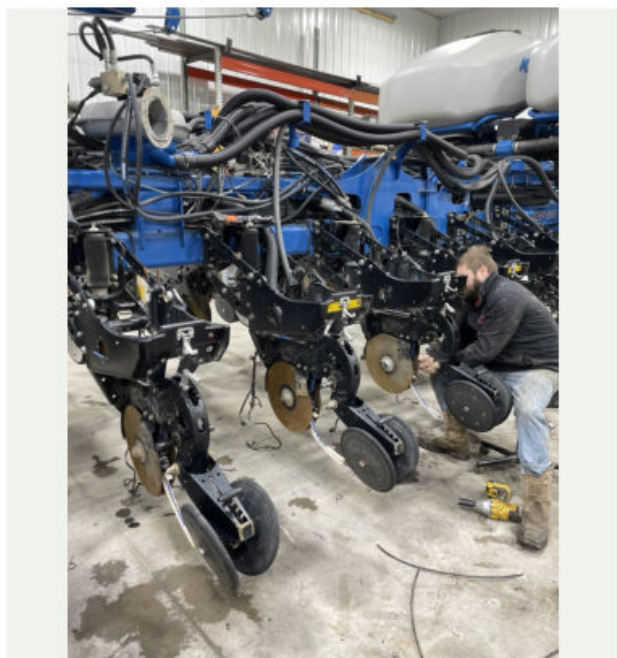

LOCAL SERVICE | COLO & YARMOUTH

## WE WORK WHEN YOU WORK.

Farming is not a 9-to-5 job. We understand that.

**Your working day does not end at five. Neither does our commitment to you.**

### LOCAL PEOPLE. LONG-TERM SUPPORT.

Planting windows are short. Weather changes quickly. A breakdown can put the whole day on hold. Cropstar understands the urgency because our business is built around the needs of growers.

From Colo and Yarmouth, we work alongside our local customers with parts, troubleshooting, shop and on-site service, and practical help when the work needs to get done.

#### BEFORE THE SEASON

Inspections, wear parts and planned upgrades help get equipment ready before the rush.

#### WHEN YOU NEED HELP

Troubleshooting and hands-on support focus on the problem that is holding you up.

#### BEYOND THE SALE

We help you understand and use the parts and technology we put on your equipment.

**Two locations. A shared commitment to the growers who count on us.**

AGRONOMY | SOIL SAMPLING & CROP SCOUTING

# KNOW YOUR SOIL. WATCH YOUR CROP.

Better information for decisions throughout the season.

**Soil testing tells you what is below the surface. Crop scouting helps you see what is happening in the field.**

## SOIL SAMPLING WITH A PURPOSE

Midwest Laboratories emphasizes soil testing as a foundation for understanding fertility and planning the next crop. Its basic soil analysis measures organic matter, phosphorus, potassium, soil pH and other indicators of nutrient supply and holding capacity.

Use that information to guide fertility conversations and compare results over time. A useful report starts with a sample that represents the area being tested.

Midwest Laboratories soil sample materials

## CROP SCOUTING: KEEP THE FIELD IN THE CONVERSATION.

Stand establishment and crop development. Weed pressure. Insect and disease concerns. Areas showing stress or uneven growth. Scouting connects field observations with the decisions you make during the season.

**Cropstar helps bring soil sampling, scouting and seed selection together around your fields and production goals.**

AG LEADER SOLUTIONS | PLANTING

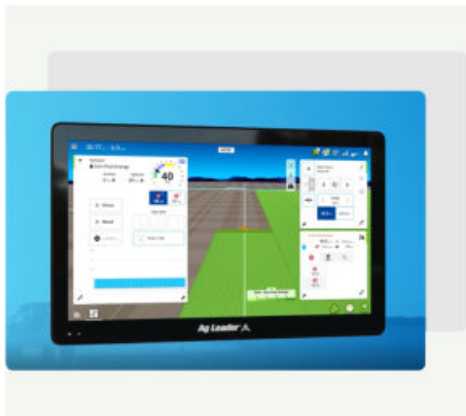

# ONE SYSTEM. A BETTER PLANTER.

Technology selected for the equipment you run.

## Bring planting control together.

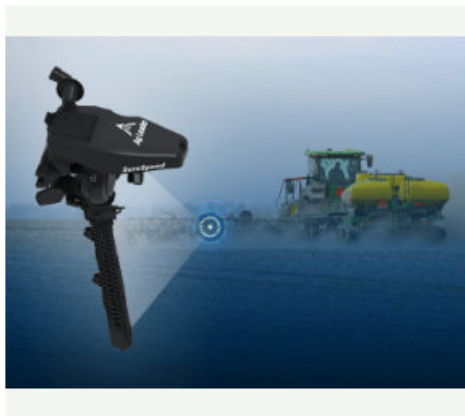

Cropstar matches the technology, mounting and installation to your planter. Start with the capabilities you need and build a practical upgrade path.

### InCommand GO 16

A common in-cab platform for compatible planting, application and guidance functions.

### SureSpeed

Seed metering and controlled delivery designed to place seed consistently.

### SureForce

Automatic hydraulic downforce and uplift to manage row-unit ground contact.

## MAKE THE PLANTER YOU OWN WORK FOR YOU.

We combine precision controls with the mechanical details that make a build work: row-unit condition, custom brackets, wiring, plumbing and a clean installation.

See it in practice: our Kinze 4900 story shows several builds combining SureSpeed and SureForce with mechanical upgrades.

AG LEADER SOLUTIONS | CONTROL

# GUIDANCE TO APPLICATION.

A connected approach to the work in your field.

**Control that fits your operation.**

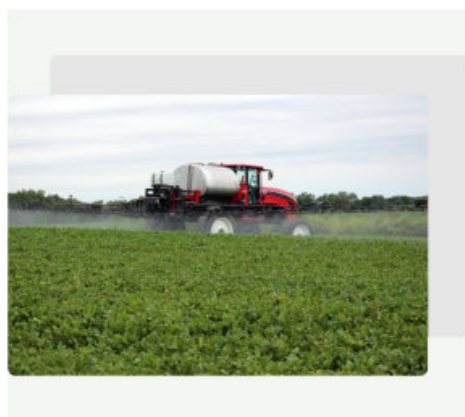

## SteadySteer

Motor-assisted steering offers a retrofit guidance option for compatible equipment.

## DirectCommand L2

Liquid rate and section control options for compatible application systems.

## RightSpot

Nozzle-by-nozzle control manages flow and pressure independently for liquid application.

## FROM THE CAB TO THE LAST ROW

Cropstar brings controls, pumps, valves, plumbing and mounting together. The goal is a system that fits your equipment and makes sense for the operator.

We review machine fit, display requirements and the full control package before choosing an upgrade.

AG LEADER SOLUTIONS | HARVEST

# TURN HARVEST INTO INFORMATION.

Measure the crop. Learn from the field.

## Yield monitoring for the combine.

### SEE IT AS YOU HARVEST

Ag Leader yield monitoring provides live yield and moisture mapping through compatible InCommand Go displays.

### CONNECT THE SEASON

Compare harvest results with field conditions and variety or prescription map layers to help evaluate what happened across your acres.

### CROPSTAR BRINGS THE SYSTEM TOGETHER.

We help select a compatible combine package, install the components, and support setup and calibration. Clean wiring, sound sensors and a properly configured display all matter to a useful harvest record.

**Use harvest information alongside soil tests, scouting notes and seed history to make the next season's decisions with more context.**

PRECISION PLANTING | PLANTING

## BUILD AROUND EVERY ROW.

Choose the upgrades that address your planter's needs.

### A practical path to better planting.

Cropstar helps connect the mechanical condition of your planter with the technology you want to run. Plan the whole system, then choose the right steps for your operation.

#### DeltaForce

Automated downforce control at the row unit.

#### vDrive

Electric seed-meter drive for planting control.

#### SpeedTube

Controlled seed delivery for high-speed planting.

### UPGRADE THE WHOLE PLANTING SYSTEM.

A precision upgrade starts with a conversation about your equipment and what you want it to do. Cropstar can pair technology installation with parts, wear-item upgrades and custom mounting work.

**Build a coordinated package that is clean, functional and easy to use.**

PRECISION PLANTING | LIQUID & DATA

# SEE THE ROW. CONTROL THE LIQUID.

Build the application system your planter needs.

## From monitoring to liquid control.

### 20|20

Monitor, control and diagnose field and equipment performance.

### SmartFirmer

Measure conditions in the seed furrow as you plant.

### vApplyHD

Liquid rate control for compatible planter application systems.

### FlowSense

Row-by-row liquid-flow measurement.

## YOUR PRODUCTS. YOUR RATES. YOUR EQUIPMENT.

From a single-product speed-and-pressure setup to a multi-product, GPS-controlled, fully automated system: Cropstar can build the mounts, brackets and plumbing around the control package that fits your needs.

PRECISION PLANTING | HARVEST

# MEASURE THE CROP. LEARN FROM EVERY PASS.

YieldSense and 20|20 for compatible combines.

**Harvest data you can put to work.**

## YIELDSense + 20|20

YieldSense measures grain flow and uses the 20|20 display to show harvest data as you move through the field.

## DETAIL BEYOND A TOTAL

The system is designed to show where yield changes within a field, giving you a record to review after harvest.

## INSTALLATION, SETUP AND LOCAL SUPPORT

Cropstar helps check combine compatibility and identify the required equipment, then supports installation and calibration. Pair harvest records with your planting and agronomy information to evaluate the season.

**The technology is part of the solution. Local help getting it installed and working is part of Cropstar's commitment.**

PARTS | MAINTENANCE & UPGRADES

## THE RIGHT PARTS. A PRACTICAL FIX.

Keep useful equipment working for your operation.

**Replacement parts. Wear items. Purposeful upgrades.**

### PARTS THAT SUPPORT THE JOB

Planter wear and maintenance

Bushings, bearings, opener components and row-unit parts.

Performance upgrades

PPS parallel-arm bushings and SMA heavy-duty double roller bearing disc openers are examples used in our builds.

Liquid system components

Pumps, valves, fittings and plumbing matched to your application.

### MORE THAN A PART NUMBER.

Bring us your machine model, the part you need or the problem you are trying to solve. We help identify a practical replacement or upgrade and how it fits into the complete repair.

### PARTS + INSTALLATION + CUSTOM FIT

Connect the part with the service, brackets or mounting work needed to make it useful.

CROPSTAR SOLUTIONS | INDIA

# IOWA KNOW-HOW. A BUILD FOR INDIA.

Custom-built three-row NH3 applicator

## THE CLIENT'S CHALLENGE

An applicator suited to their growing conditions, tractor fleet and unusually low NH3 application rates.

## MOSTLY 50 HP & UNDER

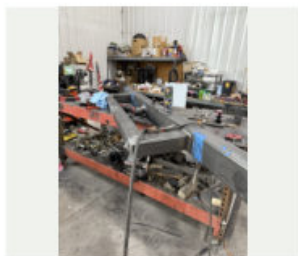

The client's tractors were much smaller than those typically used for NH3 application in the U.S. or Europe. Available horsepower was a key design constraint.

## MUCH LOWER NH3 RATES

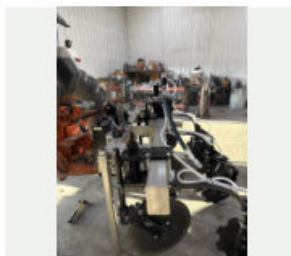

Their required application rates were well below typical U.S. use, making low-rate application a central requirement of the project.

Cropstar's response: A custom-built three-row NH3 applicator for this client in India.

## THE WORK BEHIND THE BUILD

Frame fabrication  
Custom metalwork takes shape in the Cropstar shop.

System integration  
Application plumbing and components assembled on the bar.

**Have a project in mind? Let's build your solution.**

**CROPSTAR AG SUPPLY – YOUR PARTNER IN PRODUCTIVITY.**

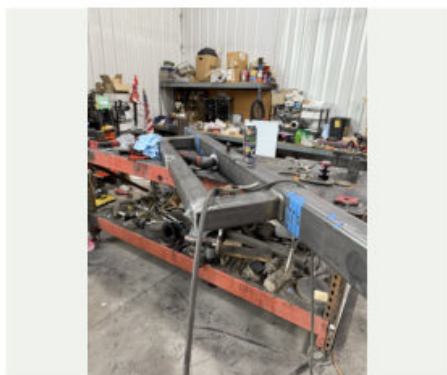

CROPSTAR SOLUTIONS | INDIA

# FROM FRAME TO CUSTOM BUILD.

Behind the three-row NH3 applicator built for India

Smaller tractors. Much lower application rates. A project shaped by the client's needs.

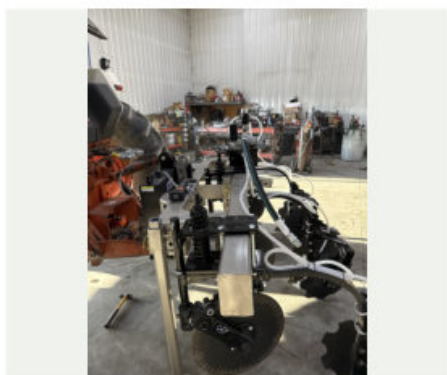

## 01 START WITH THE REQUIREMENTS

The client needed an applicator for their own growing conditions. Their tractor fleet was mostly 50 horsepower and under, so available power had to shape the build from the start.

## 02 BUILD A THREE-ROW APPLICATOR

Cropstar brought custom frame fabrication, mounting hardware and row-unit assembly together in a three-row layout for this India project.

## 03 ADDRESS LOW-RATE APPLICATION

The required NH3 rates were well below typical U.S. application rates. That made low-rate delivery a key requirement as Cropstar assembled the application plumbing and components.

CROPSTAR SOLUTIONS | PLANTER UPGRADES

# KINZE 4900. UPGRADED.

**Ag Leader SureSpeed + SureForce**

## SEVERAL BUILDS COMPLETED

Clean. Functional. Easy to use. Reliable.

## AN AFFORDABLE STARTING POINT

The Kinze 4900 offers a relatively inexpensive donor planter. In the machines we rebuilt, difficult-to-service and unreliable components created an opportunity for a practical upgrade.

## THE CROPSTAR SOLUTION

We upgraded these planters with Ag Leader SureSpeed and SureForce, creating a reliable, functional planter with a clean, easy-to-use control setup.

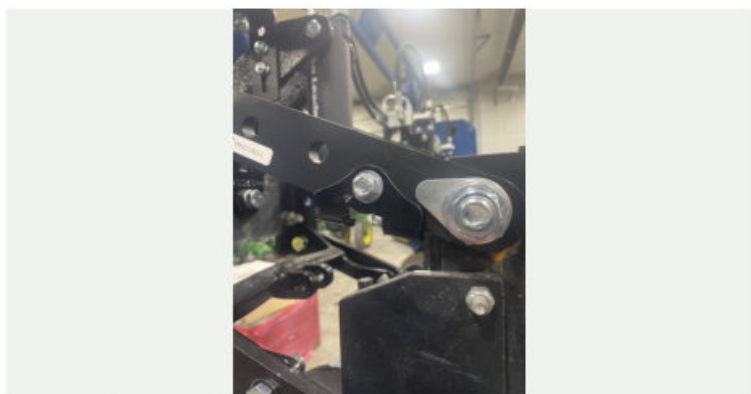

## ONE DISPLAY IN THE CAB

Planting control runs through one compatible Ag Leader display - the same display that can already be handling auto steer and other functions in the tractor cab.

## ADDITIONAL UPGRADES

PPS: Parallel arm bushing upgrades.

SMA: Heavy-duty disc openers with double roller bearings.

**SureSpeed**

**SureForce**

**InCommand GO 16**

CROPSTAR SOLUTIONS | CUSTOM BUILDS

# YOUR PLANTER. YOUR LIQUID SYSTEM.

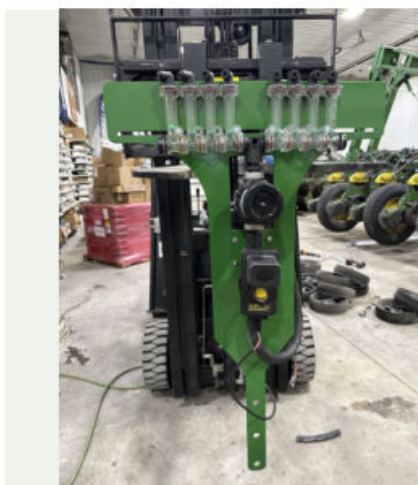

We build the system around your equipment.

**From a single-product speed-and-pressure setup to a multi-product, GPS-controlled, fully automated system.**

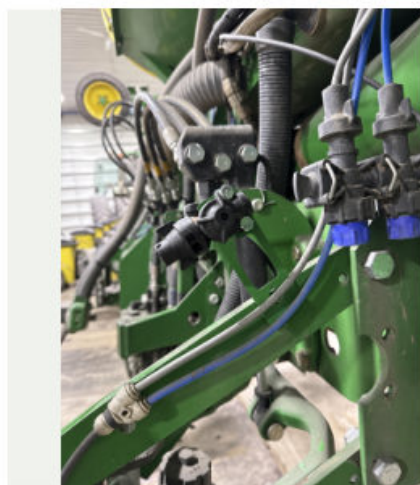

## LIQUID SYSTEM INTEGRATION

Tanks, pumps and plumbing arranged to fit your planter and application needs.

## FLOW INDICATORS & PUMPS

Custom flow indicator brackets and pump mounts bring the system together.

## CUSTOM MOUNTS & BRACKETS

Mounts built for your valves, components and available space on the equipment.

Tell us what you want to apply and how you want to control it. Cropstar can design, build and install a planter liquid system around your products, target rates, row layout and preferred controls.

## DirectCommand

Ag Leader liquid rate control integrated with compatible in-cab displays. We match the control package to your planter.

## Precision Planting Liquid Solutions

Options such as vApplyHD for liquid rate control. We help select the components and build them into your planter.

**Simple or fully automated - let's build what you need.**
